

Type 1200: Plate Link Belt

Features of the plate link belt :

- Straight running of the platelinkbelt
- Positive drive without creeping
- Large open area enables washing or drying of products on the platelink conveyor belt
- When operated in a bath, it does not carry out the bath content
- Small contact surface with product, where necessary
- Very high rigidity and long lifetime of these plate-link conveyorbelts

Application of the plate-linkbelt :

Plate link belts are very strong and resistant to shock and high temperature. They are therefore very suitable for conveyors handling heavy loads such as in the recycling industry, for the incineration of refuse or for the handling of heavy tins and trays in ovens. Platelink belting is used as : pizzaovenbelt, hardeningovenbelt, heat treatment belt, aluminiumoven belt etc.

Technical data of the platelink belt :

Pitch of cross rods	20,00 • 100,00 mm
Diameter of cross wires	3,0 • 8,0 mm
Standard materials	bright steel • stainless steel • heat resistant.
Operating temperature	below 1150°C
Maximum beltwidth	3000 mm
Termination of edges	welded

Special Features:

- With side plates, side chains or crossflights.
